

Providing Graduates with Global Quality and Entrepreneurial Spirit

The world is changing, as it is true that things never stay the same; the changing in the field of Information Technology (IT), for example.

It is quite obvious that the requirements of higher education in IT are getting more and more unlimited because of the rapid advances of IT. The needs of being well-educated in IT are going to keep on increasing in line with the development of IT itself. In the world of IT, it proves that the advances of IT exceed much more than the knowledge and skill of local society. As a result, higher education in IT is badly needed by local society members who would like to catch up with development of IT, and the better their education in IT is, the more chance they have to find a better job in the global job market, or to be entrepreneurs in accordance with their discipline. In order to meet the unmet needs of the local society members, STMIK AMIKOM has opened the program of Magister in IT to provide its prospective graduates with global quality and entrepreneurial spirit.
